Lushootseed Unicode Keyboard Map

Why Unicode?   Unicode allows you to send e-mails to people and post things on the internet, without people having to have the font on their computers.

This map and the two available keyboards are for use with fully Unicode fonts.   Older font's may not display all characters properly.   The keyboard was primarily designed for use the Lushootseed School and Lushootseed Sulad fonts.   Both were designed for the Tulalip Lushootseed Department of the Tulalip Tribes of Washington.

This Keyboard is from Tavultesoft, http://www.tavultesoft.com/ it was developed with the Tulalip Tribes.   You can find it by searching the keyboards for Lushootseed.   Free trials are available; the light version should work for almost everybody.

The same keyboard layout works with two additional keyboard programs, one for Windows and the other Mac are free, but offer less features.   They are both available for download from the Tulalip Lushootseed website along with the fonts.
